BREEAM In-Use is an online, international, environmental assessment methodology for independent, third-party assessment and certification of a building’s operational performance. Over 10% of Assets certified against BREEAM In-Use International 2015 are located in Sweden, making it one of the top 3 countries with the highest uptake of BREEAM In-Use around the world. This Country Focus publication gives an insight into the type of assets that are certified in Sweden based on location, building type and age. It is based on May 2017 data in the BREEAM In-Use online database.

**Average environmental category scores**

**PART 1**
- Materials: 28.22
- Transport: 32.60
- Waste: 28.30
- Water: 35.30
- Health and Wellbeing: 21.70
- Energy: 45.26
- Landuse and Ecology: 45.88

**PART 2**
- Materials: 36.11
- Water: 36.57
- Health and Wellbeing: 21.53
- Energy: 46.53
- Landuse and Ecology: 45.88
- Management: 54.08

**1,411,152m² certified**

**Case Studies**

**Clarion Hotel Arlanda Airport - SPP**
Clarion Hotel Arlanda Airport was inaugurated in November 2012 and certified mid-2016. Architects Jan-Ove Fogelberg and Anders Enkols were inspired by the airport ambience, and the hotel breathes a sense of creativity and exclusivity. The nearby aquifer at Brunkebergsåsen supplies the entire airport, including Clarion, with warm and cold water. This is a unique feature which highly reduces the environmental impact. SPP are using BREEAM In-Use as a tool to continually monitor, optimise and develop their buildings, thus gaining a more sustainable outcome.

**Beridarebanan 10 - Hötorgshallen, Stockholm**
Built in 1958 and expanded in 1994, the building is owned by Stockholm City and is around 15,000 m² and divided into two parts, the first a cinema and the other a market hall occupied by a number of restaurants, deli counters and small shops. The building has recently been subject to extensive renovations, leading to a reduction in total energy consumption of more than 25% between 2009 and 2012. Stockholm City has for many years committed resources to environmental and sustainability issues. The City believes BREEAM In-Use is a helpful tool, and for this reason the decision was taken to certify a large part of the city’s asset portfolio. Stockholm City has now certified a total of 100 assets under BREEAM In-Use.
